required

```
Adjusting program (CAL):
For quick setting of the instrument's accuracy. External adjusting weight
```

Calibration block: Standard for adjusting or correcting the measuring device

Peak hold function: Capturing a peak value within a measuring process

Scan mode: _/\~ Continuous capture and display SCAN of measurements

Push and Pull: The measuring device can capture

tension and compression forces

Length measurement:

Captures the geometric dimensions of a test object or the movement during a test process

Focus function:

Increases the measuring accuracy of a device within a defined measuring range

Internal memory:

To save measurements in the device memory

Data interface RS-232:

Bidirectional, for connection of printer and PC

Profibus:

For transmitting data, e.g. between scales, measuring cells, controllers and peripheral devices over long distances. Suitable for safe, fast, fault-tolerant data transmission. Less susceptible to magnetic interference.

Profinet:

Enables efficient data exchange between decentralised peripheral devices (balances, measuring cells, measuring instruments etc.) and a control unit (controller). Especially advantageous when exchanging complex measured values, device, diagnostic and process information. Savings potential through shorter commissioning times and device integration possible

Data interface USB:

To connect the measuring instrument to a printer, PC or other peripheral devices

Bluetooth* data interface: To transfer data from the balance/

measuring instrument to a printer, PC or other peripherals

WLAN data interface:

To transfer data from the balance/ measuring instrument to a printer, PC or other peripherals

Data interface Infrared: To transfer data from the measuring instrument to a printer, PC or other peripheral devices

(optocoupler, digital I/O): SWITCH To connect relays, signal lamps, valves, etc.

Analogue interface: To connect a suitable peripheral device for analogue processing of the measurements

Analog output:

how Statistics:

Using the saved values, the device STATISTIC calculates statistical data, such as average value, standard deviation etc.

PC Software: To transfer the measurement data from the device to a PC

Printer: 님

D Network interface: For connecting the scale/measuring LAN instrument to an Ethernet network

KERN Communication Protocol (KCP): It is a standardized interface command

set for KERN balances and other instruments, which allows retrieving and controlling all relevant parameters and functions of the device. KERN devices featuring KCP are thus easily integrated with computers, industrial controllers and other digital systems

GLP/ISO record keeping:

Of measurement data with date, time and serial number. Only with SAUTER printers

Measuring units:

Weighing units can be switched to e.g. UNIT non-metric. Please refer to website for more details

Measuring with tolerance range (limit-setting function): Upper and lower limiting can be programmed individually. The process

is supported by an audible or visual signal, see the relevant model
