Adjusting program (CAL):
For quick setting of the instrument's accuracy. External adjusting weight required

Calibration block:
Standard for adjusting or correcting the measuring device

## Peak hold function:

Capturing a peak value within a
measuring process

Scan mode:
Continuous capture and display
of measurements

Push and Pull:
The measuring device can capture tension and compression forces

Length measurement:
Captures the geometric dimensions of a test object or the movement during a test process

Focus function:
Increases the measuring accuracy of a device within a defined measuring range

Internal memory:
To save measurements in the device memory

Data interface RS-232:
Bidirectional, for connection of printer and PC

## Profibus:

For transmitting data, e.g. between scales, measuring cells, controllers and peripheral devices over long distances. Suitable for safe, fast, fault-tolerant data transmission. Less susceptible to magnetic interference.

## Profinet:

Enables efficient data exchange between decentralised peripheral devices (balances, measuring cells, measuring instruments etc.) and a control unit (controller). Especially advantageous when exchanging complex measured values, device, diagnostic and process information. Savings potential through shorter commissioning times and device integration possible

## WLAN data interface:

To transfer data from the balance/ measuring instrument to a printer, PC or other peripherals

## Data interface Infrared:

To transfer data from the measuring instrument to a printer, PC or other peripheral devices

## Control outputs

To connect relays, signal lamps, valves, etc.

## Analogue interface:

To connect a suitable peripheral device for analogue processing of the measurements

## Analog output:

For output of an electrical signal depending on the load (e.g. voltage $0 \mathrm{~V}-10 \mathrm{~V}$ or current $4 \mathrm{~mA}-20 \mathrm{~mA}$ )

## Statistics:

Using the saved values, the device calculates statistical data, such as average value, standard deviation etc.

## PC Software:

To transfer the measurement data
SOFIWARE
from the device to a PC

## Printer:

A printer can be connected to the device to print out the measurement data

## Network interface:

For connecting the scale/measuring instrument to an Ethernet network

KERN Communication Protocol (KCP):
It is a standardized interface command set for KERN balances and other instruments, which allows retrieving and controlling all relevant parameters and functions of the device. KERN devices featuring KCP are thus easily integrated with computers, industrial controllers and other digital systems
