stakpure ion exchange system DS 750

stakpure pressureless ionexchange systems, the economic way for producing demineralized water. Inside of the cartridge water flowes through a bed of especially mixed anionic- and cationic resins and so is purified by the well-proven method of ion exchanging. Complete system comes with an analogue conductivity meter, wall holder and tubing kit. Designed for doctors surgeries, small labs or for gaining battery water up to 15 liters a day.

Scope of delivery and technical data

Pressure less plastic cartridge

Filling of high-quality mixed bed resins

Analogue conductivity meter

Туре DS 750

Material Polyethylene

Flow rate 100 l/h Capacity (at 10°dH - total salt) 750 l

Pure water quality $0.1 - 20 \mu S/cm$

Maximum water temperature 30°C

Electrical connection 230 V / 50-60 Hz Diameter x height (replacement) 175 x 470 (350) mm Connectors R 3/4" male thread

Approximate weight (replacement) 6 (5) kg
